### **DETAILED ACTION**

1. The amendment filed on 12/8/03 has been fully considered and made of record in the instant application.

### **EXAMINER'S AMENDMENT**

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.
3. The application has been amended as follow:

#### **IN SPECIFICATION:**

Please add a new section directly before the BACKGROUND on page 1 as follows'. CROSS-REFERENCE TO RELATED APPLICATION This application is a divisional application of U.S. Patent Application No. 10/230,653, entitled "PROBE CARD, E.G., FOR TESTING MICROELECTRONIC COMPONENTS, AND METHODS FOR MAKING SAME", filed August 29, 2002, now U.S. Patent No. 6,773,938, which is incorporated herein by reference in its entirety.

On page 2, paragraph 7, delete " 4-16 " and insert instead -- 4-9, 10A and 10B, 11A and 11B, and 12-16;

On page 13, paragraph 40, after " member 320 " insert -- (step 160) --;

On page 15, paragraph 44, after " Figure 1 " insert -- to test the microelectronic component 50 (step 170) --.

4. The title of the invention is changed to the following: " PROBE CAR FOR TESTING MICROELECTRONIC COMPONENTS ". Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of name of the title."

#### **Allowable Subject Matter**

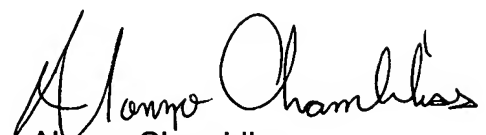

5. The following is a statement of reasons for the indication of allowance subject matter: the prior art of record does not teach or suggest the combination of a substrate with a plurality of openings extending from the front face to the back face in an array. An array of electrically isolated conductors patterned from an integral metal layer, each conductor has a contact end adjacent the front surface of the substrate, an intermediate length received in one of the opening in the substrate, and an exposed length extending outwardly beyond the back surface of the substrate a distance of no more than 200 microns. A backing member joined to the substrate, wherein the substrate has a confronting surface with a plurality of contacts so that each contact is electrically coupled to the contact end of one of the conductors in claims 52 and 63.

The prior art made of record and not relied upon is cited primarily to show the product of the instant invention.
